HEALTHCARE TRAINING

The Future of Healthcare Education is Here!

Our Growing Footprint in India's Healthcare Education Landscape

About Us

MediSim VR is a leading MedTech company transforming medical education with immersive **VR-based simulation technology**.

Founded in **2018 at IIT Madras** and a resident company of **Johnson & Johnson Innovation Labs, Boston**, we empower healthcare professionals with clinically accurate VR training and assessment solutions. Our platform enhances traditional curriculums, helping learners overcome challenges and excel in their fields.

Our solutions align with guidelines from the **National Medical Commission (NMC)**, **General Medical Council (GMC)**, and the **Association of American Medical Colleges (AAMC)**, and it is validated by the **Center for Education, Simulation, and Innovation (CESI), USA** ensuring high-quality training for healthcare professionals and students.

“Delivering structured, hands-on training that builds real-world competence.”

- **Dr. Adith Chinnaswami**
COO & Co-founder

Healthcare Workforce Skill Gap

The healthcare industry faces a critical challenge of poor skill training across all segments of its ecosystem due to inadequate access and outdated training methodologies.

- **70%** of primary healthcare providers lack proper training.
- The World Health Organization estimates a projected shortfall of **11 million** health workers by 2030.

Healthcare education facilities worldwide struggle with:

Limited hands-on experience

Outdated simulation technology

High costs of healthcare simulation training

The Dangerous Gap Between Theory and Practice:

Medical professionals are often thrust into high-stakes situations without sufficient practical experience. As medical experts agree:

"It is best for healthcare professionals to be trained via VR tools before attempting real-life interventions on patients."

MediSim VR: Bridging the Gap

MediSim VR addresses this critical challenge head-on with innovative virtual reality training solutions that make high-quality healthcare training accessible, affordable, and effective.

Healthcare Training Solutions

Skill Training in Virtual Reality (STRIV):

A protocol-based skill training library, aligned with AAMC, GMC (UK), and NMC (India) guidelines, helps students master core clinical skills. Its dual-mode capability enables structured learning in guided mode and rigorous competency testing in training mode. Branched outcomes enhance decision-making, fostering critical thinking and adaptability in real-world scenarios.

Diagnose in Virtual Environment (DIVE):

Hyper-realistic patient simulations, designed to sharpen diagnostic acumen and patient interaction skills with diverse medical scenarios. Students learn to navigate the unpredictability and intensity of real-world medical situations in a safe zone.

Study in Simulation (StudySim):

MediSim VR's StudySim combines subjects like anatomy and physiology with 3D visualizations, interactive multiple-choice questions, and key definitions to create a dynamic VR classroom learning environment.

Features

Comprehensive Library

Extensive collection of medical training modules covering diverse healthcare procedures and scenarios for comprehensive professional development.

Dual Mode Approach

Guided Mode provides structured, step-by-step learning, while Evaluation Mode rigorously tests learner proficiency.

Immediate Feedback and Analytics

Advanced AI system provides real-time assessment and performance insights during training sessions.

Customizable Modules

Flexible training content that can be adapted to meet specific institutional requirements and learning objectives.

Scalable Support

Interactive platform enabling learning sessions for large number of students, instructors, and healthcare professionals.

Advisory Panel

Dr. Gianluca De Novi,
Simulation Advisor,
Director - Harvard Medical
Simulation Lab.

Dr. Makani Purva,
Programme Advisor
Director of Medical Education, Hull
York Medical School.

Dr. Dinker Pai,
Curriculum Advisor
Simulation Expert - Ex CAE.

Dr. Bimaljit Sandhu,
Medical Advisor Board Member,
Virginia Commonwealth
University, Health System Authority.

Dr. Malav S Trivedi, FRSB.
Scientist, Entrepreneur and Advisor
Faculty-NSU's Barry and Judy
Silverman College of Pharmacy.

In the News...

Bloomberg

"The five-year-old MediSim VR has moved beyond the hatching phase: With 2,000 students training currently in the labs it has set up in medical and nursing schools, it's emerging as a serious player".

Forbes

"Our focus is not just on training individuals but on creating a global consortium of healthcare leaders to set benchmarks and share best practices across countries."

Partners

Our Partners have driven and propelled us to the forefront of healthcare innovation. We are proud to collaborate with institutions that share our commitment to advancing **medical training**.

Virtual Reality Simulation Lab (VRSL)

Our simulation lab is a fully automated, and scalable training space that uses VR technology to improve healthcare education. Our virtual reality labs empower institutions to set high standards in healthcare training and competency assessment for students and professionals at every level. The lab is also designed to accommodate large groups, with the capacity to train up to 500 individuals, making it perfect for medical education.

Milestones Globally Achieved

Our Users' Success with Our Suite of VR Training Solutions

1,00,000+

hours of simulation completed

92%

students prefer VR training methods over the traditional approach

10,000+

competency assessments completed
